

Sublingual Immunotherapy

seroSLIT® compounding Rx offers an innovative turn-key solution for medical practices interested in offering sublingual immunotherapy to their patients suffering from allergic diseases.

Our approach is based on strong science, research, and a commitment to providing unparalleled customer service.

seroSLIT® compounding Rx is your source for sublingual immunotherapy compounding.

Sublingual Immunotherapy

Immunotherapy is widely used by allergy specialists because it treats the underlying cause of allergic reactions instead of temporarily alleviating symptoms. Immunotherapy is designed to gradually desensitize the immune system to specific allergens. Patients receive small doses of a specific allergen(s) – not enough to cause a full-blown allergic reaction, but enough to build up a tolerance. Immunotherapy can potentially lead to remission of allergy symptoms, even after discontinuing treatment.

Sublingual vs. Subcutaneous Immunotherapy

There are two ways to administer immunotherapy: subcutaneously (via allergy shots) and sublingually (via drops applied underneath the tongue). Sublingual immunotherapy (SLIT) is advantageous for a number of reasons:

Shots are unpopular. Children and parents do not like shots, even for immunizations, and appreciate an alternative.

Drops are more convenient to administer. Sublingual immunotherapy can be administered at home, saving patients from having to frequently schedule doctors' appointments and miss school or work.

Drops do not require a physician to administer them. Since sublingual immunotherapy can be administered at home, patients save money on regular appointment co-pays and other charges (travel time &, time taken off work) that can add up over the course of treatment.

seroSLIT

seroSLIT is one of the leading sublingual immunotherapy services. With simple, streamlined service, seroSLIT enables medical practices to treat a wide range of allergy patients. seroSLIT's web platform has built-in tools and an intuitive design to help physicians prescribe safe and effective doses of SLIT (prescriptions), custom-mixed for (each) patients' needs.

If you are a physician and would like to learn more about setting up an account, please contact seroSLIT today. You will be pleasantly surprised by how quick and easy it is to get started.

Allergy Treatment with seroSLIT

The Turn-Key SLIT Allergy Practice allows physicians to treat mild, moderate, and severe allergy patients with sublingual immunotherapy without having to make the significant investments involved with purchasing and stocking allergen extracts, training staff, and dedicated office space.

Ordering SLIT

The seroSLIT ordering process is very simple. Serologix provides a web portal that is both intuitive and easy to operate for the convenience of the medical practice. The clinic administrator or support staff simply logs on to the Serologix web portal, inputs the patient's Rx information and billing information, and orders the SLIT allergy treatment Rx.

Automatic Renewal

The patient will receive their SLIT allergy treatment, which lasts approximately 90 days. They should follow the specific instructions for administering the drops, including how many and how often. At the end of the 90 days, when it comes time to renew the product, Serologix takes care of auto-billing the patient. The practice does not need to manage this portion of the process, and the allergy patient receives their product quickly and easily.
